SPECIFICATION FOR BLUE LED

LML-LK-BZ-2W

- Serial Number : LML-LM-BZ-2W-Run No-Bin No-L1.9T
- 3W maximum power capability
- Lead-free reflow soldering application
- Built-in ESD protection device
- RoHS compliant

Vendor		Customer

LUMENS

1. Product description

* Description

- The LK series LED is designed for the high power operation to get the high flux output applications.
- It incorporates the state of the art SMD design and high reliable material.
- It is ideal for the light source for general illumination applications, custom designed solutions.

* Features

- Maximum drive current up to 1,000mA
- Low thermal resistance as low as 6°C/W
- Wide viewing angle of 120~140 degrees
- Reflow soldering with JEDEC JSTD-020C compatible
- RoHS compliant
- * Applications
- General luminaire
- Bulb
- Downlight

2. Absolute maximum ratings

Parameters	Symbol	Min Value	Max Value	Unit	
Power dissipated	Pd		3.34	w	
Rated forward current	If		1,000	mA	
Allowable peak forward current(1)	Ір		1,300	mA]
Maximum junction temperature capability	Тј		135	°C	
Electrostatic discharge threshold(2)	ESD		±5,000	v	
Operating temperature	Тор	-40	+85	°C	
Storage temperature	Tst	-40	+85	℃	
Soldering temperature(Reflow)	Tsor		260°C, 10s	°C, s]
Soldering temperature(Hand)	Tsoh		350℃, 3s	°C, s	

(1) Ip measured at 1/10 duty cycle, 0.1ms pulse width.

(2) ESD HBM class 2 per Mil-Std-883D method 3015.

3. Electro-optical characteristics (Ta=25°C.)

Parameters	Symbol	Condition	Min.	Тур.	Max.	Unit
Peak wavelength	λр	If=350mA	445		455	nm
Dominant wavelength	λd	If=350mA	450		460	nm
Radiant output	Wrad	If=350mA	460		540	mW
Luminous output	Lop	If=350mA		16		lm
Radiant efficacy(1)	Wrad /Dd	If-250mA	40	45		0/
WPE(wall plug efficiency)	wiau/Pu	11=350MA	40	45		70
Forward voltage	Vf	If=350mA	2.9		3.2	v
Spectral line width	Δλ1/2	If=350mA		20		nm
Viewing angle FWHM	201/2	If=350mA		130		deg
Thermal resistance junction to solder pad	Rthj-s			6		°C/W
Reverse voltage	Vr	If=10uA		0.6		v
Temperature coefficient λd	TCλd	If=350mA		0.08	0.15	nm/°C
Temperature coefficient Vf	TCv	If=350mA		-3		mV/℃

(1) Radiated efficacy or wall plug efficiency(WPE) is the ratio of total integrated blue power divided by the power dissipated(Wrad/Pd). This is expressed as a percentage of input power.

(2) Parameters are measured by CAS-140 of Instrument System CO.,LTD.

(3) Measurement accuracy : $\lambda(\pm 1 \text{nm})$, Wrad($\pm 10\%$), Vf($\pm 0.05V$).

LUMENS

4. Ranks

Item	Symbol	Rank	Min.	Тур.	Max.	Condition	Unit
		Α	460	-	480		
De dient Dewen	Da	В	480	-	500		
Radiant Power	PO	С	500	-	520		mvv
	D 520 - 540						
		1	2.9	-	3.0	TE DEOurA	
Forward Voltage	Vf	2	3.0	-	3.1	IF=350mA	V
		3	3.1	-	3.2		
		w	450		452.5		
Dominant Wavelength	2.4	х	452.5		450		
	ла	Y	450		457.5		nm
		Z	457.5		460	1	

Parameters are measured by CAS-140 of Instrument System CO.,LTD.
Measurement accuracy : λ(±1nm), Wrad(±10%), Vf(±0.05V).

8. Reliability test items and conditions

Item	Reference	Test Conditions	Duration / Cycle	Number of Damaged	
Thermal Shock	EIAJ ED-4701	Ta =-40°C (30min) ~ 100°C (30min)	150 Cycle	0/30	
Operating Endurance Test	Internal Reference	Ta =25°C, IF =1,000mA	1,000 Hours	0/30	
High Temperature High Humidity Life Test	Internal Reference	Ta =60°C, RH=90%, IF =800mA	500 Hours	0/30	
High Temperature Life Test	Internal Reference	Ta =85℃, IF =500mA	500 Hours	0/30	
ESD(HBM)		±5KV at 1.5kΩ, 100pF	5 Time	0/5	
Reflow	Tsor	260℃< 10sec, Reflow Soldering	3 Time	0/30	

- Test Board : Metal board thickness=1.6mm, Copper layer thickness=0.07mm, Rth =25 °C/W

♦ CRITERIA FOR JUDGING THE DAMAGE

Item	Cumhal	Condition	Criteria fo	r Judgment]	
Item	Symbol Condition		MIN	MAX		
Forward Voltage	VF	IF =350mA	-	USL (1) × 1.1		
Luminous Intensity	IV	IF =350mA	LSL (2) × 0.7	-		
(1) USL : Upper Stan (2) LSL : Lower Stand	dard Level dard Level					

9. Recommended soldering temperature - time profile for reflow soldering

Surface Mounting Condition

In automatic mounting of the SMD LEDs on printed circuit boards, any bending, expanding and pulling forces or shock against the SMD LEDs should be kept minimum to prevent them from electrical failures and mechanical damages of the devices.

Soldering Reflow

-Soldering of the SMD LEDs should conform to the soldering condition in the individual specifications.

-SMD LEDs are designed for reflow soldering.

-In the reflow soldering, too high temperature and too large temperature gradient such as rapid heating/cooling may cause electrical & optical failures and damages of the devices.

-Lumens cannot guarantee the LEDs after they have been assembled using the solder dipping method.

Recommended Pb Free IR-Reflow Soldering Profile.

Classification Reflow Profile (JEDEC J-STD-020C)

10. Taping and orientation

- 1. Moisture proof bag.
- 2.1 Reel/bag.
- 3. Q'ty: 800(MAX)/Reel.

<Carrier tape Dimension>

11. Cautions

1 Moisture-Proof Package

- 1.1 When moisture is absorbed into the LED package it may vaporize and expand products during soldering. There is a possibility that this may cause exfoliation of the contacts and damage to the optical characteristics of the LEDs. For this reason, the moisture-proof package is used to keep moisture to a minimum in the package.
- 1.2 A package of a moisture-absorbent material (silica gel) is inserted into the shielding bag. The silica gel changes its color from blue to pink as it absorbs moisture.
- 2 Current limiting

A resistor should be used to limit current spikes that can be caused by voltage fluctuations. Otherwise damage could occur.

- 3 Iron Soldering
 - 3.1 Hand soldering is not recommended for regular production. These guidelines are for rework only.
 - 3.2 Soldering iron tip should contact each terminal no more than 3 sec at 350°C, using soldering iron with nominal power less than 25W. Allow min. 2 sec. between soldering intervals.
- 4 Storage Conditions
 - 4.1 Before opening the package: The LEDs should be kept at 30°C or less and 90%RH or less. The LEDs should be used within a year. When storing the LEDs, moisture-proof packaging with moisture-absorbent material (silica gel) is recommended.
 - 4.2 After opening the package: The LEDs should be kept at 30℃ or less and 70%RH or less. The LEDs should be soldered within 168 hours (7 days) after opening the package. If unused LEDs remain, they should be stored in moisture-proof packages, such as sealed containers with packages of moisture-absorbent material (silica gel). It is also recommended to return the LEDs to the original moisture-proof bag and to reseal the moisture-proof bag again.
 - 4.3 If the moisture-absorbent material (silica gel) has faded away or the LEDs have exceeded the recommended storage time, baking treatment should be performed using the following conditions. Baking treatment: more than 24 hours at 65±5°C
 - 4.4 Lumens LED electrode sections are comprised of a silver-plated copper alloy. The silver surface may be affected by environments which contain corrosive gases and so on. Please avoid condition which may cause difficulty environments during soldering operations. It is recommended that the user uses the LEDs as soon as possible.
 - 4.5 Please avoid rapid transitions in ambient temperature, especially in high humidity environments where condensation can occur.
- 5 Handling of Silicone Lens LEDs
 - 5.1 Avoid silicone resin parts especially with sharp tools such as pincette(tweezers).
 - 5.2 Avoid leaving fingerprints on silicone lens part.
 - 5.3 Do not apply the silicone lens part with pressure especially in SMT production. So use a proper nozzle not to press the lens part of the LED to pick and place.
- 6 Usage
 - 6.1 Do not exceed the values given in this specification.

NOTE :

All the information published is considered to be reliable. However, Lumens does not assume any liability arising out of the application or use of any product described herein.
